

Red Dirt Exploration Rehab began operation in 2007 to service a growing need for drill site rehabilitation. We offer a flexible service, tailored to each mine sites individual needs with a focus on environmental restoration to DMIRS recommended standards.

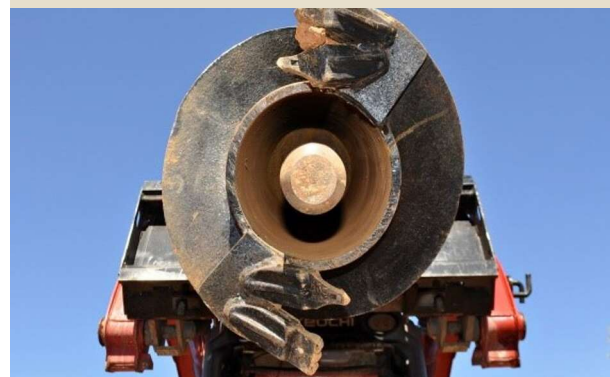

### Quality Management System

In order to meet the specific objectives of the scope of works documented in the tender invitation, the following general procedures will be employed.

- Collars cut and capped
- Sumps backfilled
- Sample bags removed
- Ripping of Pads & Tracks
- Burial of drill spoil
- Before and after rehabilitation photo's (matched to GPS coordinates)
- Waste removal
- Stabilisation of problem sites
- Construction of signage

- Induction of employees and contractors regarding safety and specific requirements
- Detailed documentation of various tasks
- Ongoing discussions and work assessments regarding issues arising
- Operators to record before and after rehabilitation photos (matched to GPS locations)
- Senior company representative to carry out audit of random sample of site works prior to completion.
